All items listed in the Beach Club are Bi-component resin made. Hardware is stainless steel. Aluminum reinforcements when applicable. Guaranteed resistant to all weather conditions and UV rays. They are easily cleaned using water and a neutral liquid detergent. Available in White or Hunter Green color.

# Bicomponent

The material used with rovergarden furniture is a composite multi-layer techno-polymer. STRUCTURAL BI-COMPONENT RESIN starts with two materials:  
A) - an outer modified solid, aesthetic resin  
B) - an inner expanded, closed cell modified resin with high mechanical resistance

The co-injection molding process employed involves one material engulfing the other at the same time so that each component retains its individual characteristics. The solid outer material guarantees a premium, aesthetic finish and is resistant to the effects of UV rays, temperature extremes, water, humidity and the wear and tear of everyday use. The inner closed cell material has the ability to withstand the structural stress and tension which result from unavoidable movements during use of the product.

Structural bi-component resin features:

- \* robust thickness
- \* smooth, Class "A" surface
- \* resistance to environmental agents
- \* high mechanical resistance and strength
- \* flexibility and comfort
- \* long product life

All Rovergarden products listed in this catalog are ASTM compliant and meet the performance standard for plastic chairs and chaises for outdoor use.

**BROUGHT TO YOU BY:**

# ROVERGARDEN

THE FIRST
