MATERIALS

The material used with rovergarden furniture is a composite multi-layer techno-polymer. STRUCTURAL BI-COMPONENT RESIN starts with two materials:

- A) - an outer modified solid, aesthetic resin
- B) - an inner expanded, closed cell modified resin with high mechanical resistance

The co-injection molding process employed involves one material engulfing the other at the same time so that each component retains its individual characteristics. The solid outer material guarantees a premium, aesthetic finish and is resistant to the effects of UV rays, temperature extremes, water, humidity and the wear and tear of everyday use. The inner closed cell material has the ability to withstand the structural stress and tension which result from unavoidable movements during use of the product.

Structural bi-component resin features:

- * robust thickness
- * smooth, Class "A" surface
- * resistance to environmental agents
- * high mechanical resistance and strength
- * flexibility and comfort
- * long product life

All Rovergarden products listed in this catalog are ASTM compliant and meet the performance standard for plastic chairs and chaises for outdoor use.

Table tops are white only and available with or without the umbrella hole (without hole is standard). All of our Bistro Table have a **stacking conical leg system**, for easy storage. Assembly/disassembly is easy, **no tool** required. Rovergarden tables are resin products guaranteed resistant to all weather conditions and UV rays. They are easily cleaned using water and a neutral liquid detergent. To insure better stability, wide single leg tables have an 81/4 lbs ballast. The conical leg system is also available for customized table tops, ask for details.
